

Test Case 200 – CAR Full File Input			
Name: CAR – Full File Input		Derived From: EBTS 1.2/EFTS 7.0	
Description: Create a CAR file with the maximum values and/or maximum field lengths; full fingerprint enrollment; full Mug Shot (Full Face, Right and Left Profile at 90 degrees, and Right and Left Profile at 45 degrees) – system permitting; Left and Right Iris – system permitting; Palm Prints and other image data – system permitting; attempt to collect sixth Type 10 record (EBTS only allows 5).			PASS / FAIL
System Type: Collection (Any)	Test Type: Conformance	Category: Enrollment	
Entry Criteria: System configured to perform a CAR enrollment; Current EBTS V1.2 verification file loaded into TransactionEdit;			
Biometrics Required: User being enrolled will need to be able to capture all 10 prints (rolled) and be able to enroll left and right Iris and mug shots (system permitting).			
Exit Criteria: Output of an EFT file from the system containing all entered information			
Expected Result/ Pass Criteria: File created returns no errors on verification and information entered into system was reproduced correctly in the file			Overall Impact Level (1-5, N/A):
Required Files/Data Sets: None			Test Operator:
Linked Test Cases: None			Test Date:
Test File (TCN and/or File Name):		Test Subject (person submitting biometrics):	
Test Start Time:		Test Stop Time:	
Procedure: Note: This procedure collects Type 2, Fingerprint, and Iris data, as well as Palm Prints and other image data (if applicable). The enrollment software may not collect data in the order shown in this procedure. The Tester should follow through the enrollment software as it is designed. For example, this procedure collects fingerprint images prior to iris images. The software may request Iris prior to fingerprint and that is acceptable. The tester should just make a note of this.			

FOR OFFICIAL USE ONLY
