

Test Case 201 – CAR Minimum File Input			
Name: CAR – Minimum File Input	Derived From: EBTS 1.2/EFTS 7.0	SUT and Version:	
Description: Create a CAR file with the minimum values and/or minimum field lengths; no fingerprints (amputation and unable to print codes); no Photos; no Iris (Photo and Iris will be collected only if system requires them).		PASS / FAIL	
System Type: Collection (Any)	Test Type: Conformance		Category: Enrollment
Entry Criteria: System configured to perform a CAR enrollment; Current EBTS V1.2 verification file loaded into TransactionEdit;			
Biometrics Required: Fingerprint, Photo, and Iris will only be collected if the system requires it.			
Exit Criteria: Output of an EFT file from the system containing all entered information			
Expected Result/ Pass Criteria: File created returns no errors on verification and information entered into system was reproduced correctly in the file		Overall Impact Level (1-5, N/A):	
Required Files/Data Sets: None		Test Operator:	
Linked Test Cases: None		Test Date:	
Test File (TCN and/or File Name):		Test Time Length:	
Test Start Time:		Test Subject (person submitting biometrics):	
Test Stop Time:			
Procedure: Note: This procedure collects Type 2 data. (Fingerprint, Photo and Iris data are collected if required by the system.). The enrollment software may not collect data in the order shown in this procedure. The Tester should follow through the enrollment software as it is designed. For example, this procedure collects fingerprint images prior to iris images. The software may request Iris prior to fingerprint and that is acceptable. The tester should just make a note of this.
