

Test Case 302 – DPRS Special Input 1			
Name: DPRS – Special File Input 1		Derived From: EBTS 1.2/EFTS 7.0	
Description: Create a DPRS file with the special character test and invalid input test. Fingerprints will be collected and sequence check capability will be evaluated (if available). Note: Fields that had special characters evaluated in the Test Procedure 131 – DPRS Maximum input are not evaluated again unless the field is mandatory.			PASS / FAIL
System Type: Collection (Any)	Test Type: Conformance	Category: Enrollment	
Entry Criteria: System configured to perform a DPRS enrollment; Current EBTS V1.2 verification file loaded into TransactionEdit;			
Biometrics Required: User being enrolled will need to be able to capture all 10 prints (rolled and slap) and be able to enroll a facial image and right Iris (system permitting) and left iris will be marked as unable to capture.			
Exit Criteria: Output of an EFT file from the system containing all entered information			
Expected Result/ Pass Criteria: File created returns no errors on verification and information entered into system was reproduced correctly in the file			Overall Impact Level (1-5, N/A):
Required Files/Data Sets: None			Test Operator:
Linked Test Cases: None			Test Date:
Test File (TCN and/or File Name):		Test Subject (person submitting biometrics):	
Test Start Time:		Test Stop Time:	
Procedure: Note: This procedure collects Type 2, Fingerprint, and Iris data. The enrollment software may not collect data in the order shown in this procedure. The Tester should follow through the enrollment software as it is designed. For example, this procedure collects fingerprint images prior to iris images. The software may request Iris prior to fingerprint and that is acceptable. The tester should just make a note of this.			

FOR OFFICIAL USE ONLY
